2

a)

5

b) Q.

IP address indicates the final destination and it does not specify the intermediate routers/gateways.

5

c) R.

The frame F2 is originated at the router R and therefore the source MAC address in frame F2 is the MAC address of R.

5

3	<p>a) B2E – An online service provided by the bank to its employees</p> <p>b)</p> <ul style="list-style-type: none"> • Manage their personal activities need to be done during work hours without leaving the workplace • Get information better and faster, easily <p>c) Yes.</p> <p>It is expected to enhance their efficiency and satisfaction as it enhances the balance between the employees' work and personal life</p> <p>d)</p> <ul style="list-style-type: none"> • Content selection and suggestion • Content prioritization • Alerting 	<p>2 or 0</p> <p>2</p> <p>2</p> <p>2</p> <p>4</p> <p>1</p> <p>1</p> <p>1</p>
---	---	--

4

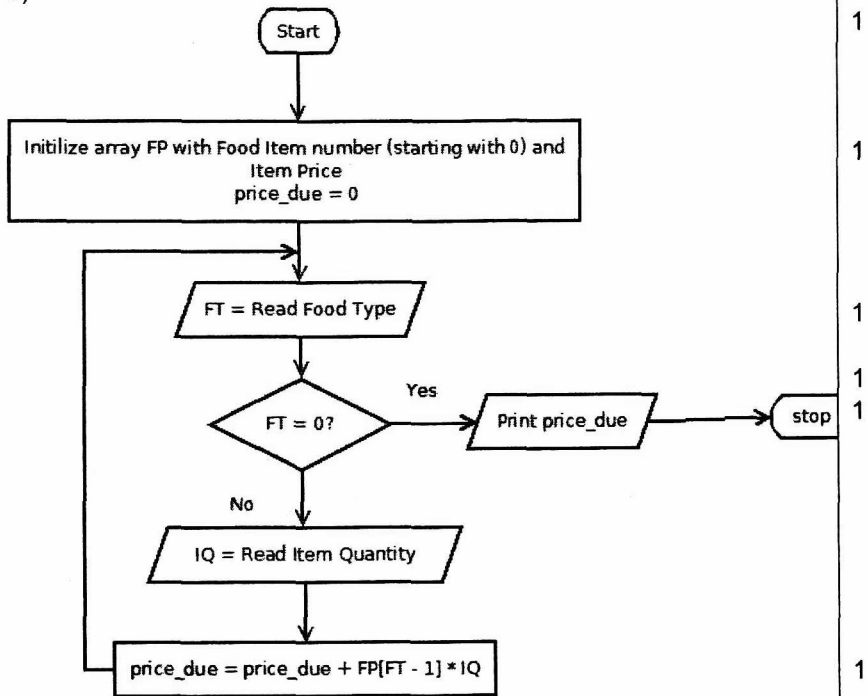

a) Inputs

- i) Input to indicate end of food items
- ii) Food Type
- iii) Number of items of the food type

Output

Payment due for the tray.

b)

Star/end : 1 Mark

Correct Initialization : 1 Mark

Correct Inputs : 1 Mark

Correct Loop : 1 Mark

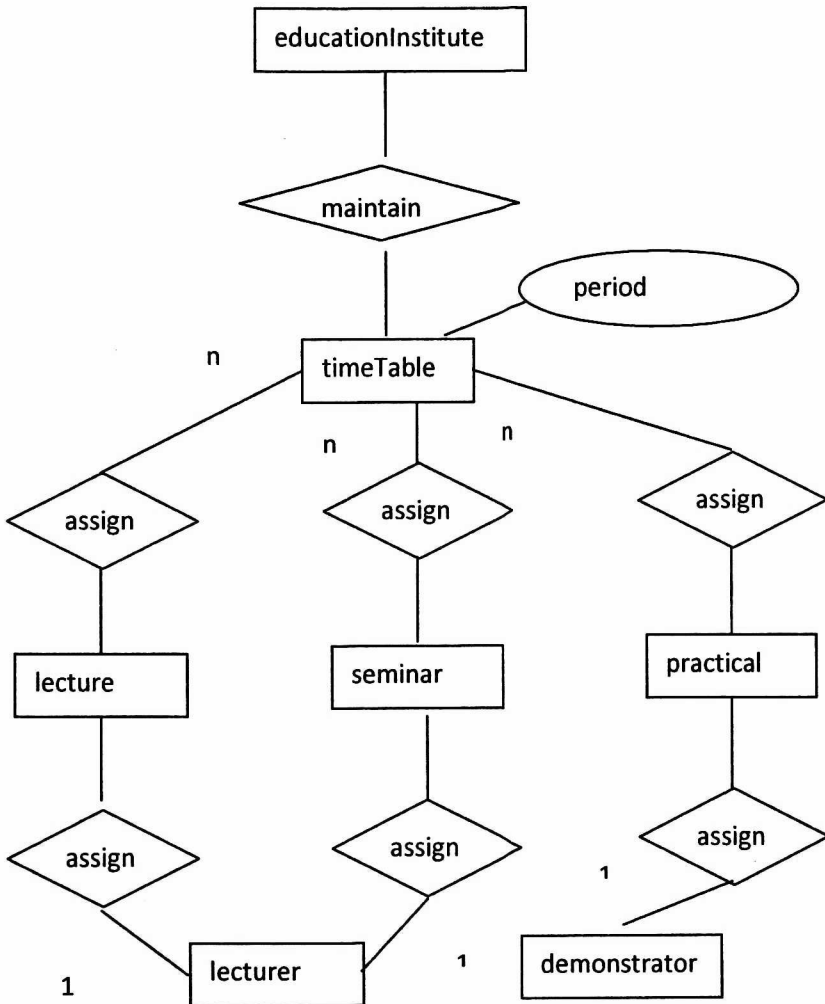

Correct Computation : 1 Marks

Output : 1 Mark

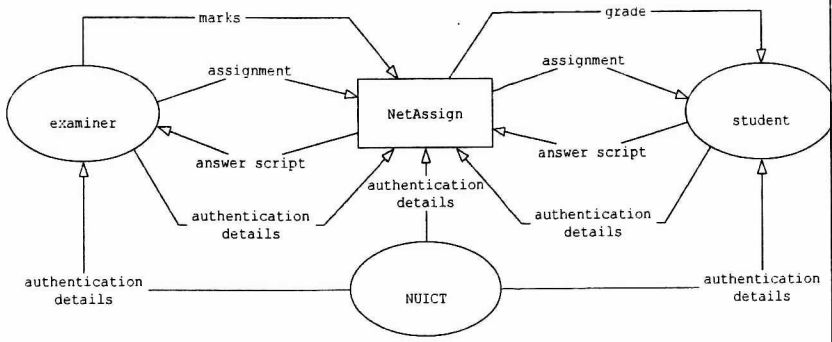

```
c)
price_due = 0.0
IP = [10.00,12.00,15.00,10.00,25.00,45.00,50.00,25.00,10.00,12.00]
FP = int(input("Enter food type : "))
while FT !=0:
    IQ = int(input("Enter item Quantity : "))
    price_due = price_due + FP[FT-1] * IQ
    FT = int(input("Enter food type : "))
print(price_due)
```

Note :

- 1 mark : price initialization
- 1 mark : array initialization
- 1 mark : input food type and Quantity
- 1 mark : correct loop
- 1 mark: correct computation

6

(1 mark for each component)
